

# Kartik Mohindru

## Software Developer (ETL)

Making raw data useful by developing a variety of ETL solutions that encompasses diverse languages and tools. By working in a diverse enterprise architecture involving Excel, text, ERP tools, database, datawarehouse as sources and destinations I've developed additional report generation skills that involve visualization tools.

SAS application server

Microsoft SQL server 2012/2018

MySQL

Oracle 11g

### Familiar with

HTML

CSS

javascript

tableau

powerbi

jupyter

Cron-tab

## WORK EXPERIENCE

### Enfusion Interface Development

#### Enfusion Systems Pvt LTD

05/2020 - Present

#### Tasks

- I'm involved in the entire product development lifecycle and continuous maintenance of the product proprietary to Enfusion which caters to 500+ clients and interacts with a wide range of heterogeneous sources of data. My tasks include:
  - Developing data pipelines to ingest data from heterogeneous sources (ranging from legacy sources like mainframe to modern sources like Third-Party APIs, Big-data platforms) based on protocols particularly defined under Enfusion, which helps in the reconciliation of daily transactions,
  - Designing custom reports for different destinations in the form of a variety of messages (including simple text messages, XML, internal API being leveraged as a source externally and formats specific to clients),
  - Creating dashboards using Enfusion specific platform for In-depth time-series analytics of performance of a fund based on different hedge fund components
  - Creating Domain specific functionality in sync with Enfusion's standards and framework to enhance data orchestration process making overall process smooth.
- Responsible for collaborating with a couple of core third-party partners to develop custom solutions for their specific requirements. Additionally, integrated the solution with Enfusion's proprietary platform giving them an enhanced experience of the services being provided by the company.
- Initiated the development of a whole new set of automation in sync with the existing indigenously developed solution by Enfusion which has increased the efficiency across the teams by approximately 70% by reducing the manual intervention leading to faster onboarding of the clients. This provided a better client experience and an enhanced reputation for the product across the financial market.
- Being an integral part of the end-to-end development and maintenance of the platform created in-house by Enfusion has helped me in getting deeply versed with this product. This along with my existing skills in a number of different technologies has enabled me to:
  - Provide faster resolution of the issues thus meeting required SLA (Service Level Agreements) that has been agreed upon with the clients
  - Provide a satisfactory RCA (Root Cause Analysis) with a logical explanation to the clients

These have resulted in a better value experience for the client and a substantial increase in the revenue for the company.

## AWARDS & RECOGNITION

Individual spot award for outstanding contribution at Evry.

Worked on IOT based POC that got into top 15 of Evry's conclave

Kudos certificate of appreciation for outstanding contribution at Enfusion

## Trainings

As a part of an initiative to make developers aware about the domain Enfusion created trainings under its own proprietary. I underwent 3 of them:

- Industry Overview and Asset Management
- Fund Structure and Fund Principle
- Financial Markets and Products

1. **Project:** Interfaces Development  
**Role:** ETL Developer(Associate Level) **Team:** Size 8-10 **Skills used:** PDI, Shell scripting, Unix, MySql, Python, Javascript, Java.

## Associate Software Engineer

### Evry India Pvt LTD

06/2018 – 04/2020

#### Tasks

- To interpret client's requirements and based on the requirement develop the solutions for them
  - Develop jobs as per the environment and tools, required to extract data from heterogeneous sources transforming it as per the business logic and then loading it into the data warehouse where the reconciliations are done on the data.
  - Various shell scripts are created and scheduled in crontab for file handling
1. **Project:** Infogroup  
**Role:** ETL Developer **Team:** Size 8-10 **Skills used:** Talend, Shell scripting, Unix, MySql, Oracle
  2. **Project:** Sedgwick  
**Role:** ETL Developer **Team:** Size 8-10 **Skills used:** SSIS, SAS, SQL server 2005
  3. **Project:** TireHub  
**Role:** ETL Developer **Team:** Size 8-10 **Skills used:** SSIS, SQL server 2012, window server 2012

## Software Engineer

### Embit Plus

12/2017 – 06/2018

#### Tasks

- To understand client's requirements and based on the requirement develop the solutions for them
- Worked on POC'S for use cases
- Make test cases

## Software Trainee Engineer

### CPA Global services

03/2017 – 12/2017

#### *Tasks*

- Wrote SQL scripts, created stored procedures, functions, etc as per client's requirement.
- Automated the process by creating dynamic SQL queries, developed and scheduled jobs using SSIS packages

1. **Project:** Foundation IP

**Role:** Software Trainee Engineer **Team:** Size 8-10 **Skills used:** SQL, SSIS, SSMS

## EDUCATION

---

Bachelors of engineering in Electronics and communication
